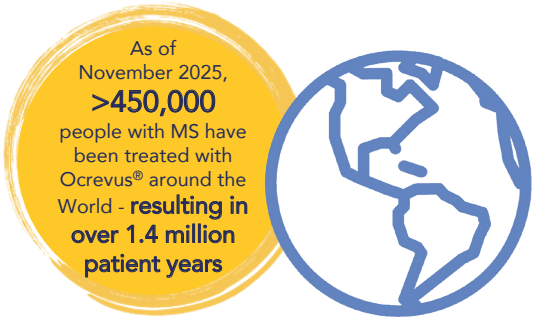
OCREVUS is the only aCD20 approved for both RMS and PPMS1,2 with >11 years of clinical experience[1]

With its convenient ~10-minute*, twice-yearly injection delivered by an HCP, OCREVUS SC facilitates the treatment experience, allowing patients to forget about their MS treatment for six months[2]

This convenience leads to a superior patient experience with at least 98% of patients preferring OCREVUS SC to previous DMTs[3]



Skraćenice: SC - subkutano; RMS - relapsna multipla skleroza; PPMS - primarno progresivna multipla skleroza, aCD20 - anti-CD20
